Nomad's Battery Cable for iPhones

September 19, 2018 - by Melody Wren

Nomad's new charger fits in a pocket. The battery cable is a five-foot long charging cord woven from super-durable ballistic nylon with a built-in battery that's got enough power to fully recharge a totally dead phone. For \$50, who needs to think twice? This high capacity portable battery knows your priorities. It charges your phone first, then charges its internal battery.

The Nomad Battery Cable is a cable designed for the iPhone that offers the ability to charge the phone and transfer data all in one cable, with a lightning adapter on one end, an inline battery, and a USB plug on the other end.

This cable is compatible with the iPhone 5 through iPhone X.

Rather than include an instruction booklet, in true minimalist style, the instructions are printed on the inside of

the box. A silicone cable strap is included to conveniently keep the cable wrapped up neatly.

The cable is made extremely well and will unlikely fray with use. I also like that built-in battery; I can carry just one cable for both data and charging purposes.
